

ICE Workshop

Basics of Psychometrics: Deciphering “It Depends”

Alpine Testing Solutions

Brett P. Foley, Ph.D., Sr Psychometrician, Dir. Professional Cred.

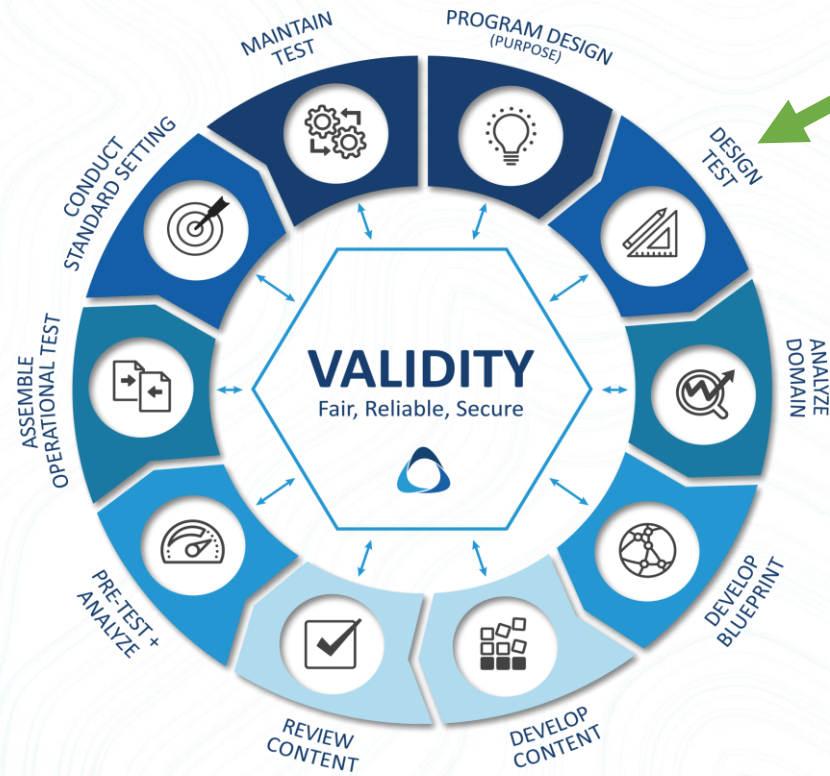

Corina M. Owens, Ph.D., Psychometrician

Validity

How do we know the decisions we are making
about candidates are valid?

Test Development Process: Design Test

Test Design

- Purpose should include information on:
 - Intended use of the test
 - Intended interpretation of the results
 - Potential misuses of the test/results
- Purpose should be informed by:
 - Intended value to stakeholders
 - Structure of the larger program
 - Requirements related to the test

Basic Analyses

- Exam/Item Performance Over Time

- Score/Time Combination

Domain Analysis

- Underlying knowledge, skills, and abilities (KSAs) of tasks/functions identified to:
 - Clarify enabling sub-tasks/sub-functions
 - Provide tools to downstream users (e.g., survey participants, item writers)
 - Inform translation of tasks into measurement objectives
- Might be referred to as:
 - Task specifications
 - Cognitive enablers
 - Descriptors

Development Activities in the Virtual Environment

- Can you do them and what does that look like?
 - You can!
 - We have successfully conducted all exam dev meetings virtually
 - How those look varies based on the needs of the clients
 - SME involvement
 - SME location
- Flexibility, flexibility, flexibility
- Tools are VERY important

Psychometric Security Analyses: Detecting Collusion & Pre-Knowledge

Security Analysis:	Brief Descriptions:	Focus:
Unscored-only Analysis	Health check analysis on unscored items only	Items
Moving Average Pass Rates	Snapshot of the average pass rate over time	Form
Differential Person Functioning (DPF)	Review of how a candidate performs on an exam – compare how the candidate did on unscored items vs. how they did on scored items	Person
Differential Item Functioning (DIF)	Review of how items perform on an exam – compare how items perform on identified groups of candidates	Items
Bivariate Score by Time	Comparison of score vs. time for a candidate	Person
Score Similarity	Comparison of candidates with similar scores/patterns	Person
with Clustering	Cluster candidates into different groups for further investigating	Person
Person Residual Correlation (“B3”) – <i>Currently experimental, if interested, discuss w/Psych lead and Brett.</i>	Experimental - TBD	Person
z-Score Report	Comparison of demographic variables (e.g. test centers)	Test Center

Remote Proctoring: Top Areas of Concern

- Security
- Validity/Fairness/Consistent Experience/Equivalence
- Access/Capacity/Ease of Use
- Capacity for Alternate Item Types
- Reputation/Stakeholder Buy-in
- Cost
- Proctor Concerns
- Accreditation
